

Sustainability Management

Risk-resilient and sustainable operations through data-driven insights.

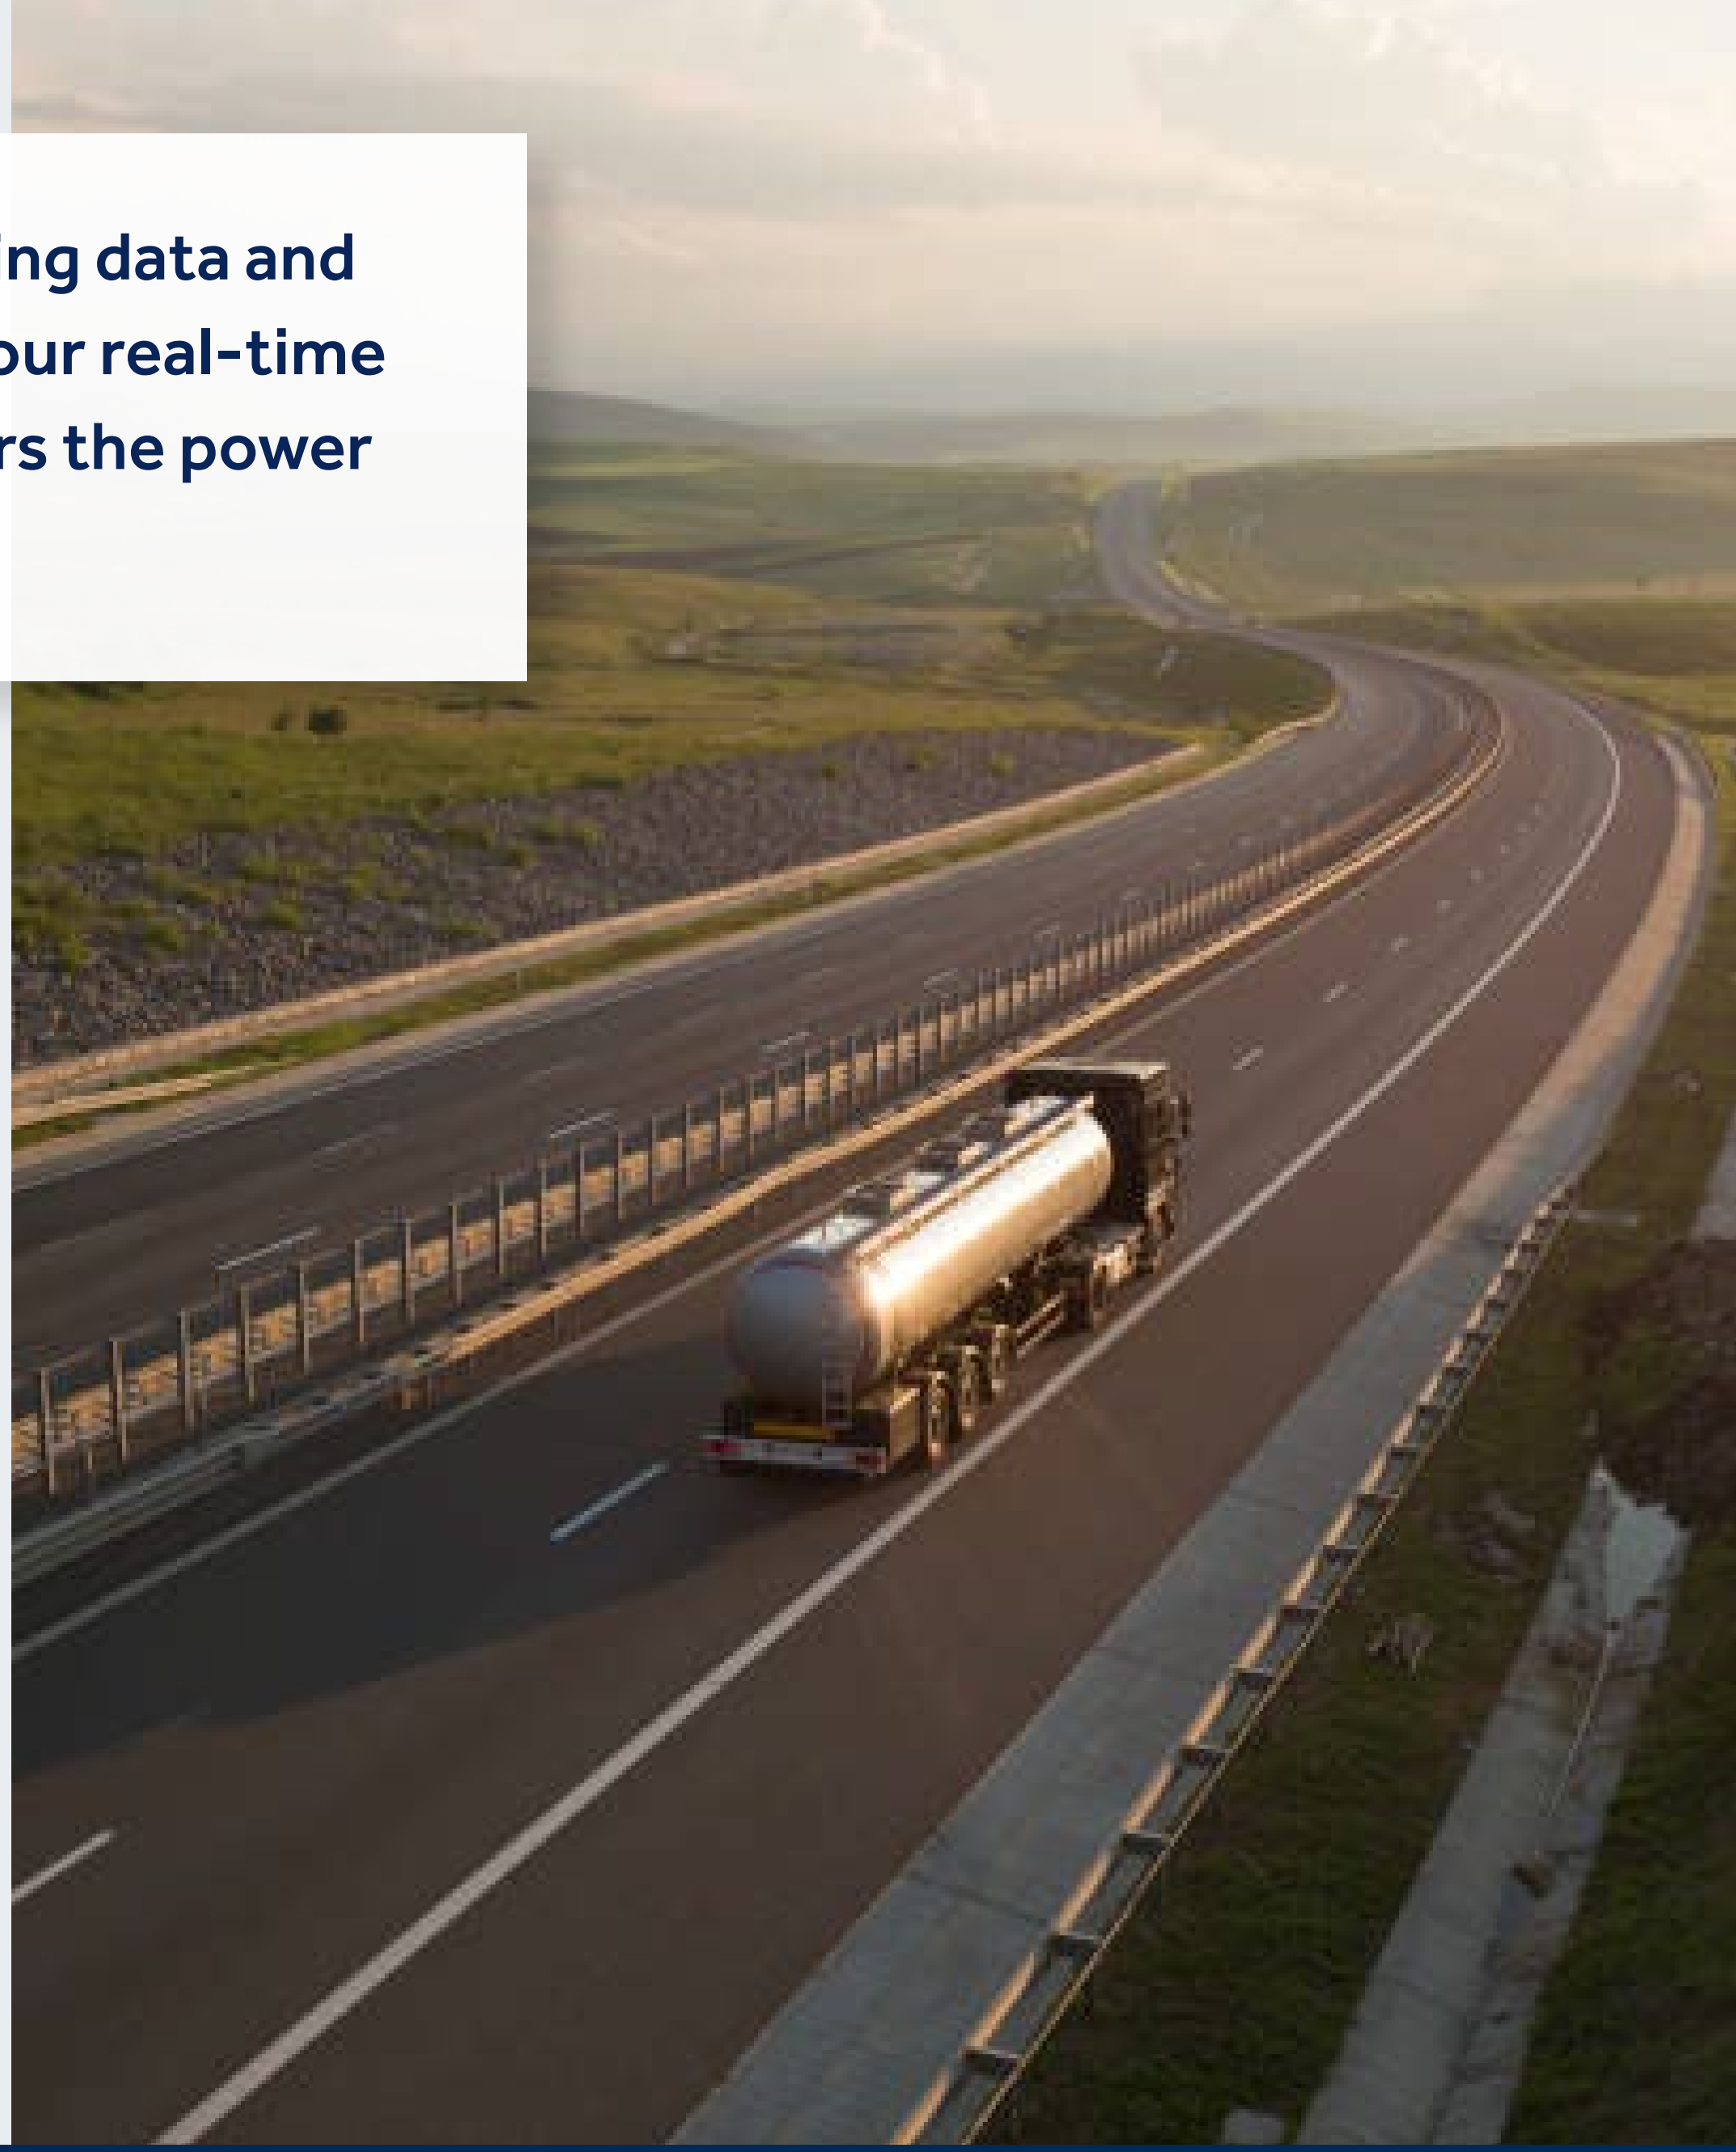

Leverage machine learning for process automation, business simulation, and enhanced operational transparency.

With the largest network of logistics tracking data and proprietary machine learning technology, our real-time visibility platform gives supply chain leaders the power to maximize efficiency

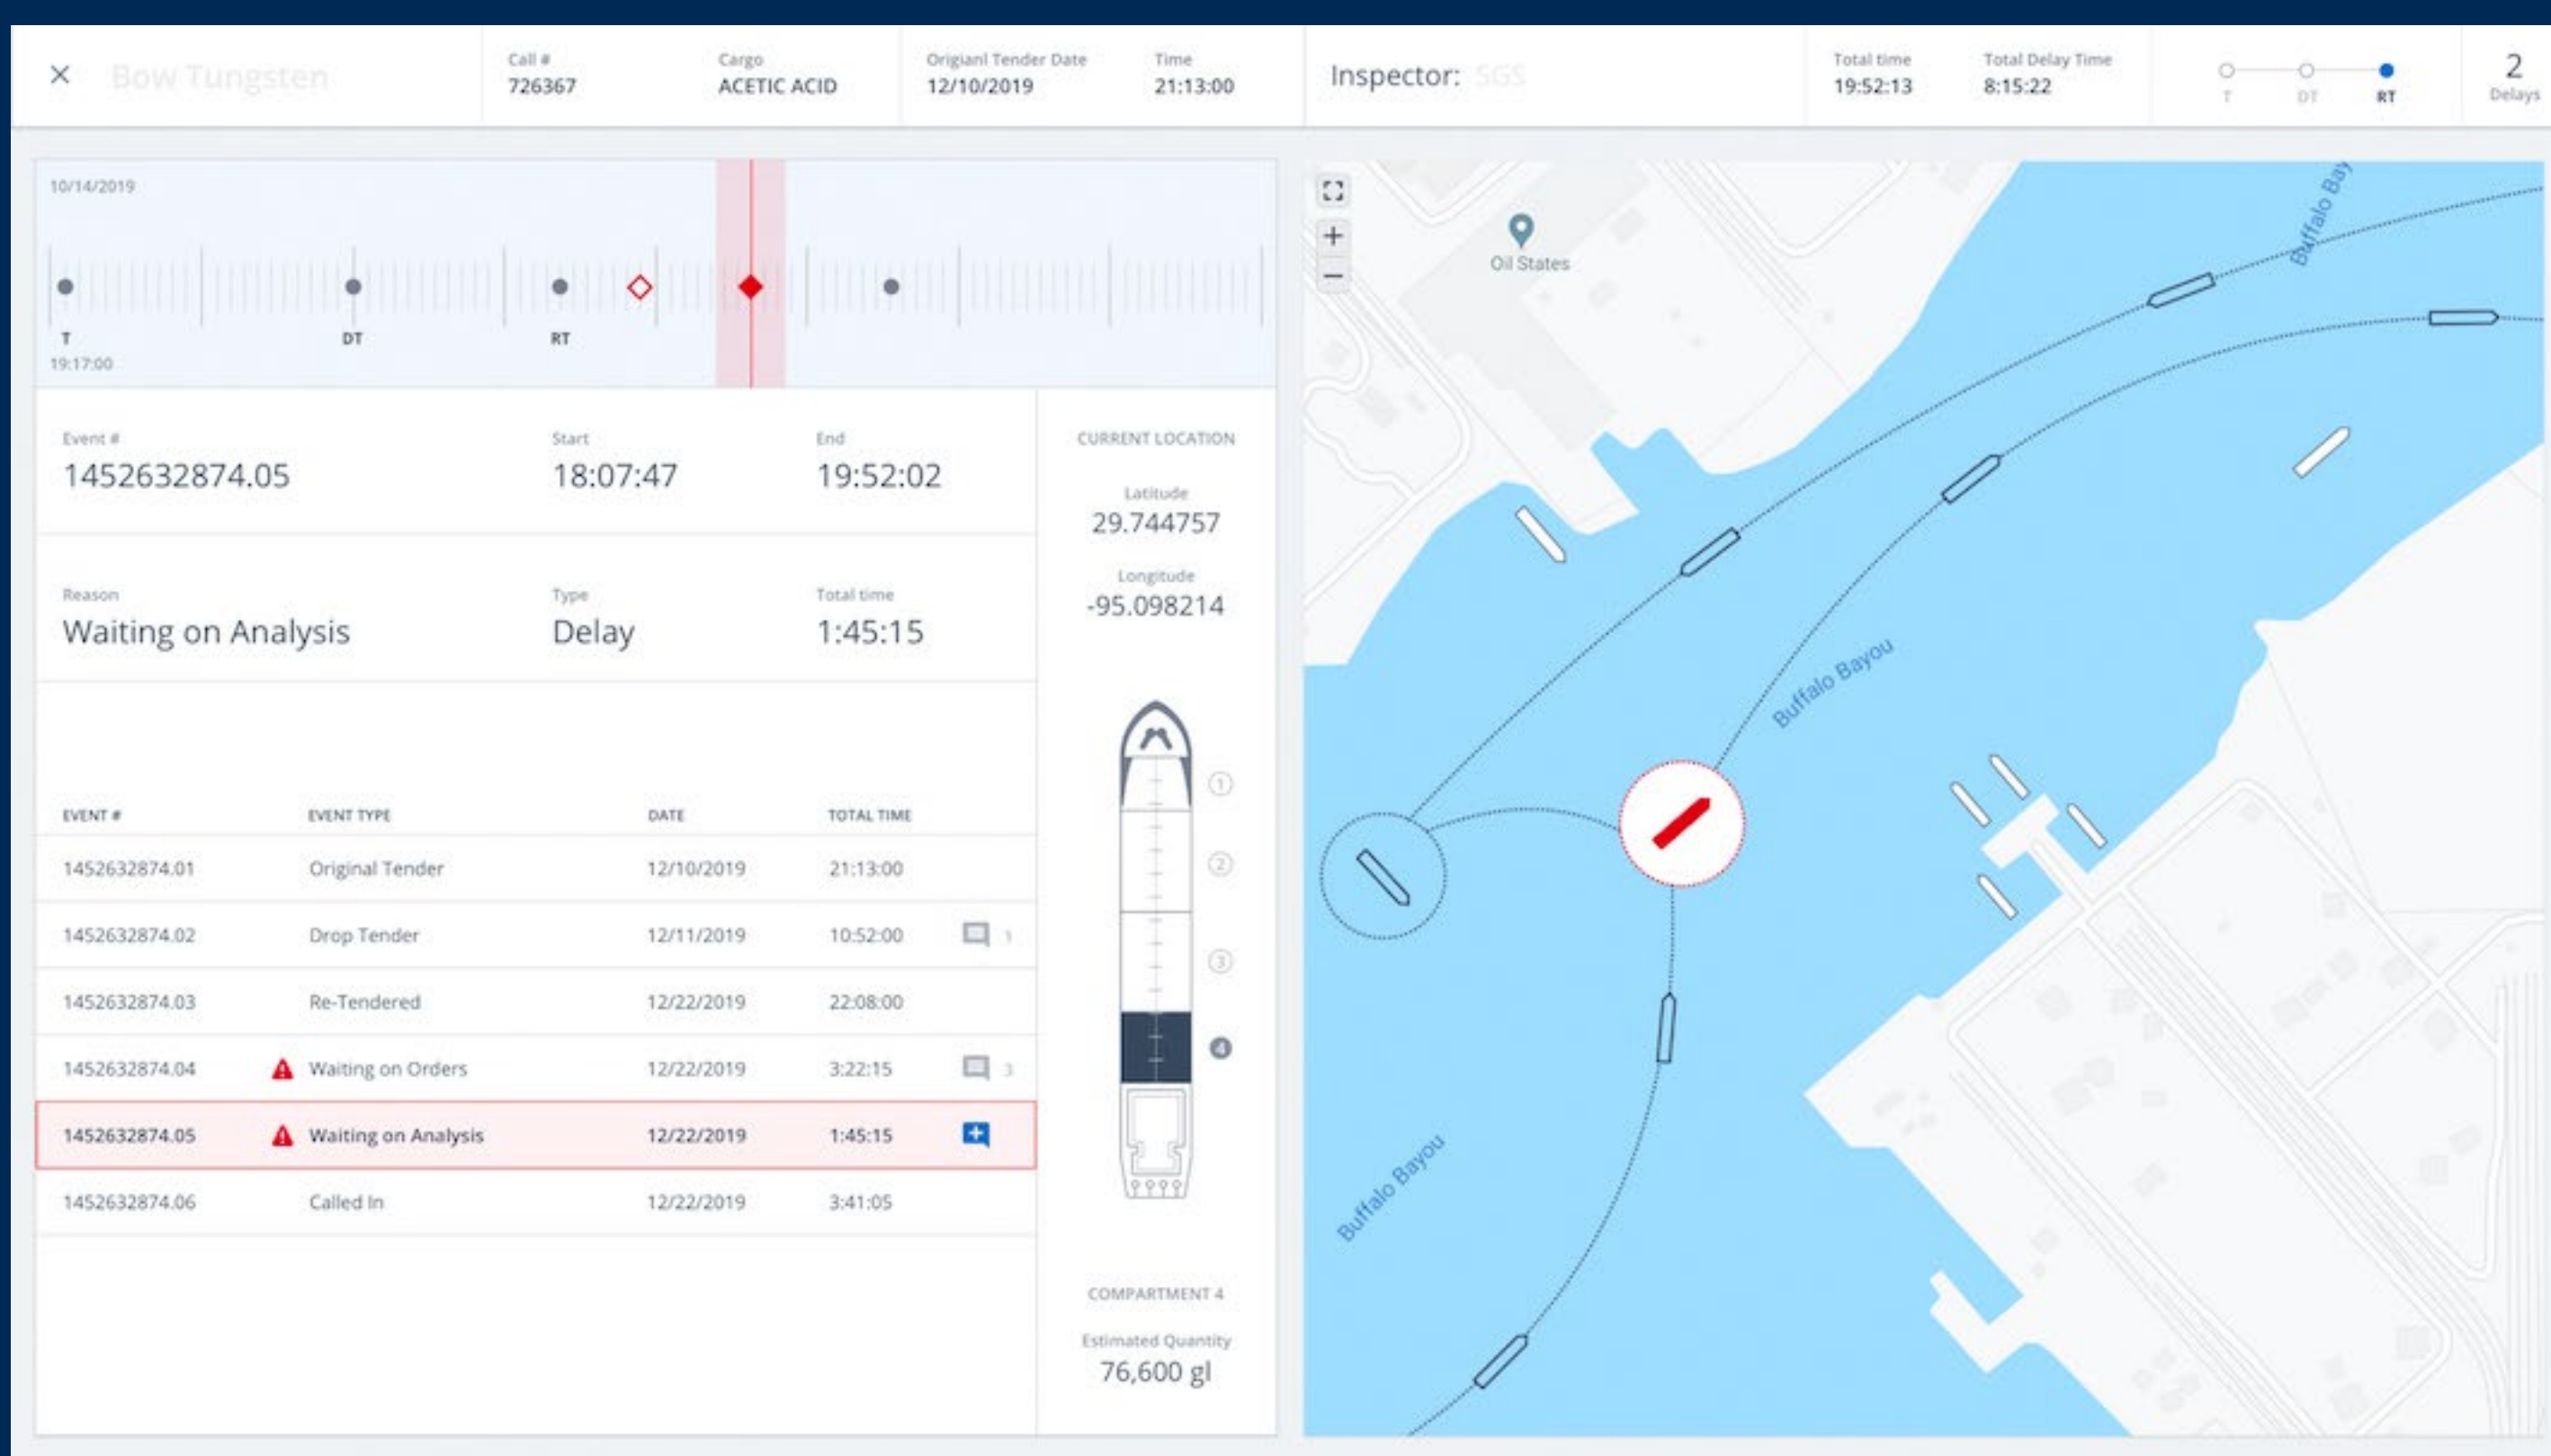

Lower Operating Costs: Transportation charges add up quickly. FourKites helps you minimize those risks by reducing dwell and preventing product loss on temperature-controlled shipments.

Deliver Superior Service: Increase your on-time delivery rate and give your customers full visibility along the way, with automated status notifications and live tracking dashboards.

Streamline Digital Workflows: With flexible systems integrations and digital collaboration features like instant messaging, electronic document collection and in-depth analytics.

Sensor Data intelligence for proactive management

Screen Title and effect on operations. Marketing theme to tie it all together. Potential Case Study area or link to learn more.

Platform Features

+ Data Visualizations

Data Integration Just Got Easier.

+ Downstream Operational Excellence

Made possible by leveraging simulation modeling and analytics.

+ Procurement as a Science

Better visibility across supply chains and vendors.

Analyze and evaluate hundreds of suppliers to get a better understanding of supplier performance. Leverage Data Analysis and data integration toolkits. Identify which suppliers to leverage more, help develop further, or eliminate.
